Dataset 的部分,我把 src 和 tgt 結合起來(combined),把 combined 當作 input 送給 model 去 train。target 就是 tgt

	src	tgt	combined			
0	0+0=	0	0+0=0			
1	0-0=	0	0-0=0			
2	0*0=	0	0*0=0			
3	(0+0)*0=	0	(0+0)*0=0			
4	0+0*0=	0	0+0*0=0			

我把全部的 Dataset 中前面 10000 和後面 10000 筆資料中有括號的和沒有括號的另外創 dataset(brackets_df, no_brackets_df),我覺得有無括號對答案的預測應該蠻重要的,因為有要先算的部分,和一般從左到右算還是有不一樣的,而且有些是有括號和沒括號結果一樣。還有答案是正的和負的個別也創了dataset,這部分我只是覺得可能答案的正負會影響 model 做正負的運算。而math_dataset 是我隨便取 20000 筆的資料(263000:283000),還有一個 total dataset,我取前 10000 和後 10000,這兩個單純是隨便一筆資料來訓練。

brackets_df						no_brackets_df				
	src	tgt	combined			src	tgt	со	mbined	,
0	(0+0)*0=	0	(0+0)*0=0		0	0+0=	0		0+0=0	
1	(0-0)*0=	0	(0-0)*0=0		1	0-0=	0		0-0=0	
2	0+(0*0)=	0	0+(0*0)=0		2	0*0=	0		0*0=0	
3	0-(0*0)=	0	0-(0*0)=0		3	0+0*0=	0	0	+0*0=0	
4	0*(0+0)=	0	0*(0+0)=0		4	0-0*0=	0	(0-0*0=0	
positive_df negative_dr						lf				
	src	tgt	combined			sr	c t	gt	combi	ned
0	0+0=	0	0+0=0		0	0-0-1	=	-1	0-0-1	1=-1
1	0-0=	0	0-0=0		1	0+0-1	=	-1	0+0-1	1=-1
2	0*0=	0	0*0=0		2	(0+0)-1	=	-1	(0+0)-1	1=-1
3	(0+0)*0=	0	(0+0)*0=0		3	0+(0-1)	=	-1	0+(0-1)=-1
4	0+0*0=	0	0+0*0=0		4	0-(0+1)	=	-1	0-(0+1)=-1

Model 部分,因為我是把整個算式丟給 model 去算,所以預測出來的 pred_y 也是整個算式字元的預測,但我只要等號後面預測的答案,所以我從 batch_x 中找出等號所在的 index,把後面的拿去算 loss。loss function 沒有改變,還是用 Cross Entropy。

total	brackets
<pre>4 * 1 8 = pred_y: - 1 6 batch_y: 6 0 4 9 * 4 + 1 4 = pred_y: 2 9 6 batch_y: 2 1 0 4 + 1 5 + 0 = pred_y: 1 9 6 9 batch_y: 1 9 (1 5 * 0) - 4 = pred_y: 3 0 batch_y: - 4 4 + 1 5 - 0 = pred_y: 9 0 5 5 2 batch_y: 1 9</pre> Validation Loss: 8.437071301159449e-06	<pre>(4 + 1 5) * 1 = pred_y:5 5 batch_y:1 9 4 - 1 5 * 0 = pred_y:2 batch_y:4 Validation Loss: 3.300430762465112e-06</pre>
no_brackets	positive
<pre>(4-14)+49= pred_y:42 batch_y:39 4+(14-49)= pred_y:888 batch_y:-31 4-14+48= pred_y:119 batch_y:38 4-14+49= pred_y:781 batch_y:39</pre> Validation Loss: 1.938885134222801e-06	4 + 1 5 + 0 = pred_y:1 7 3 0 batch_y:1 9 0 * (4 - 1 5) = pred_y:2 batch_y:0 (4 + 1 4) - 4 9 = pred_y:4 2 1 4 batch_y:- 3 1 (4 + 1 5) - 0 = pred_y:5 0 batch v:1 9 Validation Loss: 1.2610510111699114e-06
negative 4 9 * (4 + 1 4) = pred_y:- 1 8 batch_y:8 8 2 4 + 1 4 + 4 9 = pred_y:- 1 3 batch_y:6 7 1 * (4 - 1 5) = pred_y:- 4 0 batch_y:- 1 1 4 - 1 5 - 0 = pred_y:- 1 0 batch_y:- 1 1 Validation Loss: 7.280849558810587e-07	math 4 - 1 4 - 4 8 = pred_y:4 2 9 batch_y:- 5 8 4 - 1 5 = pred_y:3 6 batch_y:- 1 1 4 + (1 4 - 4 9) = pred_y:2 3 3 batch_y:- 3 1 4 + 1 4 - 4 9 = pred_y:1 7 9 batch_y:- 3 1 Validation Loss: 3.3517582664899237e-07

嘗試調整

4 + 1 4 - 4 9 =
pred_y:- 3 2
batch_y:- 3 1
(4 + 1 5) * 1 =
pred_y:1 7
batch_y:1 9
(1 4 * 4 8) - 4 =
pred_y:3 0
batch_y:6 6 8
4 * 1 4 * 4 9 =
pred_y:0
batch_y:2 7 4 4
1 * (4 - 1 5) =
pred_y:0
batch_y:- 1 1

batch_size = 1000

Validation Loss: 0.03807859867811203

batch size 比較大,loss 也變大了

4 + 1 4 * 4 9 =

pred_y:1 5 5

batch_y:6 9 0

(4 + 1 4) - 4 9 =

pred_y:- 2 0

batch_y:- 3 1

4 9 * (4 + 1 4) =

pred_y:1 8 2

batch_y:8 8 2

(1 4 * 4 8) - 4 =

pred_y:4 3

batch_y:6 6 8

4 + 1 4 + 4 8 =

pred_y:5 4 batch_y:6 6 在一個 epoch 中依序用不同資料訓練

Validation Loss: 2.143628563544553e-07

雖然 loss 看起來變更小了,但錯誤還是蠻多的
